Disease and Health Video

Name _____

1. On June 2, 1881, Louis Pasteur conducted an experiment with the Anthrax bacteria on sheep and other farm animals.

   A. What was the major purpose of this experiment?

   B. If Pasteur did not have a control group in his experiment, what explanation could have been given for why the animals given the vaccine remained healthy?

2. Why was the doctor of 100 years ago as helpless as the doctor of 2000 years ago in treating sick people?

3. Explain the two competing theories for how we can improve the health of the general population.
